

# Submit Weekly Check-In

POST

Azure  
PostgreSQL

checkins.py

checkins  
table

## Part 1 — Overview

|                |                                                                                                    |
|----------------|----------------------------------------------------------------------------------------------------|
| API Name       | Submit Weekly Check-In                                                                             |
| Method         | POST                                                                                               |
| Cloud Service  | Microsoft Azure — Azure Database for PostgreSQL<br>teammatch-db.postgres.database.azure.com        |
| Input          | JSON body with student/team context and progress fields                                            |
| Output         | The created check-in record with a generated <code>id</code> and <code>created_at</code> timestamp |
| Related Module | checkins.py                                                                                        |
| Database Table | checkins                                                                                           |

## Purpose

Allows a student to submit their weekly progress check-in, recording hours worked, tasks completed, blockers, and confidence level. Used by instructors to monitor team health and flag at-risk students.

## Part 3 — Request & Response

### Sample Request

POST

/checkins/

```
{
  "student_id":      "a3f1c2d4-...",
  "team_id":         "b7e2a1f9-...",
  "course_id":       "cs-499-fall",
  "hours_worked":    8,
  "tasks_completed": "Implemented login page and connected to backend auth endpoint",
  "what_i_worked_on": "Frontend authentication flow",
  "tasks_planned":   "Add form validation and error states",
  "next_week_plan":  "Complete profile setup page",
  "completion_status": "on_track",
  "contribution_type": "frontend",
  "confidence_level": 4,
  "needs_help":      false,
  "blockers":        null,
  "evidence_url":     "https://github.com/org/repo/pull/42",
  "peer_shoutout":    "Alex helped me debug the CORS issue",
  "week_number":      7
}
```

## Sample Response

201 Created

```
{

}
```

## Error Cases

**422 Unprocessable  
Entity**

**Error 1 — Missing Required Field**

Triggered when a required field like `tasks_completed` or `week_number` is omitted.

```
{
  "detail": [
    {
      "type": "missing",
      "loc": ["body", "tasks_completed"],
      "msg": "Field required"
    }
  ]
}
```

**422 Unprocessable  
Entity**

**Error 2 — Invalid Data Type**

Triggered when `hours_worked` or `confidence_level` is sent as a string instead of an integer.

```
{
  "detail": [
    {
      "type": "int_parsing_error",
      "loc": ["body", "hours_worked"],
      "msg": "Input should be a valid integer, unable to parse string as an integer"
    }
  ]
}
```
